

45. (Amended) A process of manufacturing a composition suitable for capturing unwanted molecules comprising the steps of:

- BZ
- (a) providing cyclodextrin, a cyclodextrin-compatible surfactant, and a cyclodextrin incompatible surfactant;
 - (b) combining said cyclodextrin-compatible surfactant and said cyclodextrin-incompatible surfactant to form a first mixture; and
 - (c) subsequently combining said cyclodextrin with said first mixture to form said composition suitable for capturing unwanted molecules;

wherein cyclodextrin is present in the composition in an uncomplexed form, or is complexed with material having a cyclodextrin complexation constant of less than about $5,000 \text{ M}^{-1}$.
